REJUVENATION THERAPIES

Acclaimed one of the top 100 dentists in the world and one of the most influential people in dentistry, when it comes to health and wellbeing Dr. Miguel Stanley is always one step ahead.

Well known for his pioneering spirit, ethics and passion for gold standard dentistry, he has always been focused on the fundamental link between oral health and general health. Everything is connected and this is how **White Clinic**, the leading dental center of the world that he founded in 1999, became the first to combine **Biological Dentistry and Regenerative Medicine**.

In addition to developing advanced biological dentistry protocols, Dr. Miguel Stanley is actively introducing new medical concepts and therapies in areas such as regenerative medicine and longevity.

Regenerative Medicine: Live Longer, Live Better

Changing the way we approach health is all about renewing our body, our mind, and our outlook on life. Regenerative Medicine - which has the potential to heal or replace cells, tissues and organs affected by age, disease or trauma - is a transformative and holistic approach to health and wellness.

It is powered by innovative, non-invasive, cutting-edge treatments and life-changing protocols that are designed with one goal in mind: to be an empowering catalyst in aiding the body to heal itself safely, naturally, completely.

The T7 Treatment Philosophy

Dr. Miguel Stanley designed a simple yet powerful treatment philosophy that is always 100% tailored to the patient's age, lifestyle, current state and needs. A streamlined process that creates immune-boosting, performance-enhancing, energy-improving protocols.

TEST

Treatments are based on facts,
not on opinions.

A full set of diagnostic tests are
performed to understand the baseline
and what specific supplementation
the patient requires.

TARGET

An open conversation with the patient is
crucial, in order to fully understand
their needs and concerns,
which are then cross-checked with their
medical history and
diagnostic test results.

THINK

Once all the information has been
processed, the medical team devises
a therapy strategy,
idealizing the best sequence of
treatment over the ideal time frame
for optimal results.

TALK

The team clearly communicates the
strategy, associated costs and time
frame to the patient.
The treatment plan must be agreed
upon by all parties, alongside an
understanding of the risks
and rewards involved.

TREAT

Treatment begins and can combine a
series of regenerative therapies,
in order to achieve the
desired clinical outcome.

TRANSFORM

Progress is constantly monitored with
regular blood tests and the treatment
plan is adapted accordingly.

THRIVE

The patient will feel their life improve
dramatically, from brain function and
energy levels to better sleep and daily
performance.
